

Integrated, consolidated network inventory management

VC4 is a leading independent provider of comprehensive network inventory management solutions to operators, carriers, utility providers and more.

We help them to manage their networks, across all legacy, current and future infrastructure, efficiently and cost-effectively, for the full lifecycle – **plan, build and operate.**

Take control of your data with VC4

With over 20 years of experience, we're experts in OSS data management, delivering class-leading inventory management solutions with deep integration to all network elements. Accurate, updated, and comprehensive, our solutions enable you to take control of your data, drive process optimisation and unlock new levels of efficiency.

Plan. Build. Operate. Leverage your data assets.

Innovation in inventory management

Headquartered in the Netherlands, our team brings deep expertise from leading operators and vendors to deliver innovative inventory and data management solutions to service providers globally.

We help you to eliminate scattered data silos, unlocking a single, consolidated view. Born from the experience of working with leading operators, we recognised, understood, and sought to solve the OSS data problem.

Inventory is complex – operators and service providers must manage assets across different domains, spanning multiple generations of technology.

A single view of your inventory

VC4 solve these challenges, delivering a consolidated, consistent, accurate view, available to all users and accessible by any system and business process. With a single view of your inventory, you can connect more processes, driving automation and seamless service discovery.

This eliminates operational friction and boosts efficiency. From network planning, to build and on to operations, VC4 supports the full-service lifecycle, helping you to manage complex networks and plan investments more effectively for future evolution. We help any network operator – fibre, broadband, mobile – across different sectors, such as telecoms, utilities, education, and rail, as well as large enterprises manage their infrastructure, connections, and customer relationships.

Reduce costs and grow profit

Taking control means you can reduce costs and grow profit, by accelerating time to market and time to repair. VC4 gives the tools you need, updated through daily reconciliation, consistently and reliably.

- Accurate, consistent view
- Combines services, physical, logical, and virtual assets
- Adapted to any network or technology
- Proven with leading operators
- Supporting key business processes
- Delivering operational and performance insights

“VC4-IMS provides a complete, single source of data to support the entire customer lifecycle journey, at every point, helping you to deliver effective, real-time network inventory management and, in turn, to unlock new levels of performance and provide an optimised customer experience. It extends to active and passive networks, as well as the last mile – enabling better planning and supporting service agility.”

COMPANY OVERVIEW BROCHURE

Our customers benefit from the clarity and insights we unlock, drawn from all network infrastructure and assets. We help them to simplify processes, deliver better experiences and manage their network investment programmes.

Talk to our experts and find out how we can help you transform operations.

Modular solutions and professional services to support your business

VC4's solutions are backed by an outstanding professional services team that ensures rapid integration and smooth time to deployment. They ensure full compatibility with your network environment and quickly adapt to new interfaces and technologies. Regardless of the different solutions in your network, you'll get the single source of truth you need.

Modular solutions, delivered by experts

Our solutions are modular, extending core functionality with options for workflow management, warehouse and spares' management functions, Impact Analysis, and much more.

Choose the options you need for your business to ensure a perfect fit with existing OSS / BSS functions.

Globally, we work with a network of outstanding partners that can take responsibility for delivery, support, and integration to suit your unique needs. We also collaborate with providers of complementary solutions that extend and enhance the functionality we offer.

So, whether you need to replace legacy systems, consolidate infrastructure, or begin greenfield operations, we have a solution to match your business requirements – proven, scalable, and cost-effective for every network.

Get in touch with our team to explore VC4.

- Efficient, end-to-end network operations
- Seamless digital service delivery
- Zero-touch order and service management
- Rapid Impact and cash analysis
- Comprehensive SLA monitoring and assurance
